

# Clipsal Home Automation

A lifestyle more convenient than you ever imagined.

# Make your dream home a reality.

If you plan on building your dream home, a home automation system from Clipsal Integrated Systems can turn that dream into reality. Imagine a home that turns lights on and off automatically, waters the garden, gets the best out of home theatre systems, and looks after itself while you're away. It's all possible with home automation.

Our systems integrators can design an automation system that's suited to your lifestyle and needs both now and in the future. And you don't have to be a millionaire to own a 'smart' home. Automation systems range from entry-level security systems to extensive energy management systems controlling such services as lighting, security, air-conditioning and home entertainment.

## Welcome Home

You'll love coming home to HomeMinder. By calling ahead on your mobile and selecting the 'Welcome Home' mode, HomeMinder will create the perfect environment to come home to by turning on lights, air-conditioning and playing your favourite CD. These can also be programmed to operate automatically at preset times. HomeMinder even knows when it's sunrise and sunset to turn outside lights on and off, and close curtains automatically.

## HomeMinder

Clipsal Home Automation can make any new home, a 'smart' home. And the 'brains' behind a Clipsal system is HomeMinder, the world's smartest housekeeper. HomeMinder links all of the home's electrical services and enables easy, programmable control from anywhere in the house, even via a mobile phone or PC.

The best thing about HomeMinder is 'Mode Control'. A keypad or your phone can be used to select a number of 'Modes'. For instance, upon leaving for work, enter your personal code to activate the 'Away' mode. This automatically arms the security system and turns off air-conditioning and any lights that remain on in the house.

You'll love coming home to HomeMinder.

# The Ultimate House-Sitter

Select 'Holiday' mode when leaving the house for an extended period and you'll be leaving your house in safe hands. HomeMinder will arm the security system and ensure that the garden is watered regularly. It will also give your home the "lived-in" look while you're away by turning lights on and off at programmed times and opening curtains during the day.

As well as creating the lived-in look while you're away, HomeMinder is clever enough to let you activate or disarm your security system over the phone. You can even unlock the front door to let someone in!

## Virtual Grounds Keeper

HomeMinder can be programmed to water your garden at set times automatically. You can even control your irrigation by phone from anywhere in the world. A Clipsal Rain Sensor can also be installed so that HomeMinder only waters the garden when it needs it.

## C-Bus2 Control and Management System

HomeMinder can be used on its own or in conjunction with the amazing C-Bus2 Control and Management System to deliver an even greater level of convenience and control.

C-Bus is a microprocessor controlled wiring system used to control lighting and other electrical services within the home. It acts like a hub, linking your home's electrical services such as lighting and security, and allowing communication between them. We call this "distributed intelligence".

Innovative C-Bus products like the SceneMaster and Touch Screen wall units, as well as 'smart' switches like Neo, act as the command systems for C-Bus. Using these products can trigger certain responses in one or more devices connected to the C-Bus network. For example, pushing one button on SceneMaster can turn all the lights on downstairs and open the curtains.

# Great for entertaining

A C-Bus home automation system is great for those who like entertaining friends as it lets you create moods – dramatic, romantic, practical or elegant – at the press of a button...or the touch of a screen.

Great new products like the stylish SceneMaster and C-Bus Touch Screen allow you to control your home's entire lighting system, as well as other devices, all through one compact wall unit. They enable you to get the best out of your home theatre as well. With one push of a small remote you can dim lights, close curtains and turn the volume up. You can recreate that cinema experience in your very own lounge room, without getting out of your seat.

## SceneMaster

SceneMaster can control up to 33 lighting groups in and around your home and you can easily program and recall your 5 favourite lighting scenes for any situation, from a quiet dinner to parties. By pressing one button, garden and pool lights switch on to welcome guests, interior lights dim while entry lights brighten, and your favourite music is channelled to speakers throughout your home.

Recreate that cinema experience in your very own home.

## C-Bus Touch Screen

This stylish Touch Screen provides a small and easy to use interface to a Clipsal home automation system. It can replace the need for dimmers and switches and is customisable to suit your requirements. Incorporating a touch sensitive LCD screen and infrared receiver, the C-Bus Touch Screen enables you to dim the lights, adjust the volume and control the air-conditioning through one unit.

The Touch Screen also features Mode Control. For example, your favourite lighting scenes for watching movies can be preset. Then, by simply selecting the "Movie" mode by touching the screen icon or using the remote, your entire lounge room will be transformed, creating the perfect environment for watching DVDs.

# Smarter Switches

## Smarter Switches

Left lights on downstairs? Don't get up. A single switch connected to HomeMinder lets you turn off every light in the house from next to your bed.

But in the world of home automation, a switch can do a lot more than turn lights on and off. The exciting new Neo and Reflection switches not only look great, they can be programmed to control any device you like, from venetian blinds to entertainment systems.

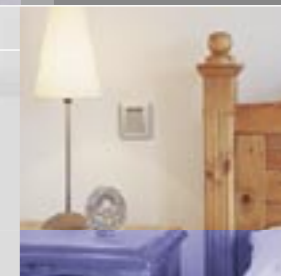

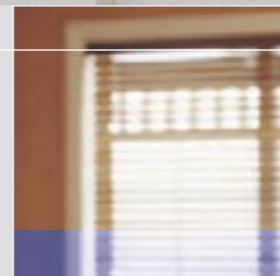

### Reflection

Constructed from smooth stainless steel and boasting a flat rectangular design and the latest C-Bus automation technology, the Reflection range is designed to make building management easier and look right at home in today's modern domestic environments.

### Neo

Neo is a stylish modern and cleverly constructed switch with the smarts to match. Featuring an intelligent automation system and infrared remote, Neo is capable of controlling any number of devices.

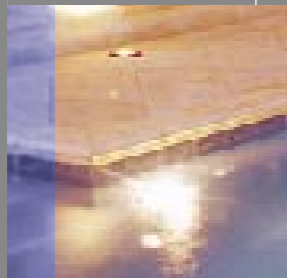

*In the world of home automation, a switch can do a lot more than turn lights on*

# Phone Home

## Home

Any phone, including your mobile, can be used as a control device. Simply call home and enter a code to access Clipsal HomeMinder. A voice prompt will list a range of control options which can be selected by pushing buttons on your phone.

## Tailored to your lifestyle.

Not only will home automation make your new home more convenient, secure and energy efficient than you ever imagined, it also offers amazing flexibility and expandability, as it can be adapted to suit both your lifestyle and the technologies in the future.

Today's homes are rapidly changing as this new technology becomes more widespread due to its affordability. Home automation doesn't have to be expensive. With HomeMinder, you can start out with a basic system and add to it as your needs change, quickly and inexpensively.

If you're at the planning stages of your new home and would like to know more about home automation, contact Clipsal Integrated Systems. Our systems integrators will work together with you and your builder to design a home automation system tailored to suit you.

## PC Control

The new Clipsal HomeGate software provides a simple to use interface to a home's C-Bus system via a standard PC or Internet connection. HomeGate provides scheduling, manual control and monitoring of a C-Bus system from a PC running Windows™ 95, 98, 2000, NT, ME or XP. HomeGate comprises of a Project Editor, Real Time Monitoring and Control, a Real Time Scheduler, Security and Access Control and Internet Access. It also includes Help and Support documentation.
