smart living

C-Bus[®]
WIRELESS
The 240 volt Wireless Control System

What is a smart home?

We live in a world of convenience. Motorised garage doors, keyless entry and electric windows on our cars, remote control TV's, DVD players and airconditioners, even microwave ovens and dishwashers. Not a day goes by when we don't rely on 'smart' technology to make our lives easier.

So what about the rest of your house? How many times have you turned off your bedside lamp only to realise you've left a light on, or pressed 'play' on your DVD remote only to get up again and dim the lights? Or worse still... arrived at work and wondered 'did I turn the iron off?'

With Clipsal C-Bus® Wireless - you can make your home a smart home, automating your whole home or individual rooms. You can add to it as you want or as your needs change, and the best news is it's very affordable!

It's your home – make it a smart home and enjoy smart living!

Start with the wow factor

Remember that a smart home is all about enhancing your lifestyle...so ask yourself 'what are the things that my family will enjoy in our home?'

If you are going to include a big screen TV or home cinema projector, then this is a great place to start.

You are going to want to make the most of this area, so why not get that Hollywood-at-home experience by adding remote control lighting. Imagine the look on your friends' faces as you sit down to watch your favourite DVD and dim the lamp from the comfort of your chair.

If you fit a C-Bus® Wireless light switch, not only can you control your lamp and lights by remote, you can also create a 'scene' at the press of a button to turn on lamps and lights to a desired level.

You can even have an 'all off' mode that turns the lamp and lights off at the push of one button - either on the remote, or at the light switch.

Now look at your living areas

Your kitchen, family room and dining area are the heart of your home. This is where you spend the most time - whether it's preparing meals, relaxing in front of the TV, or dining with family and friends.

C-Bus® Wireless can bring a whole new level of convenience to your living areas by giving you one-touch control of lights, lamps and even appliances.

If you've ever struggled into your home with an arm full of groceries, you'll appreciate features such as a 'Welcome Home' scene that turns on your kitchen, family room and entrance light with just one press.

You can even operate it by remote control from your car, so you'll never have to come home to a dark house again.

A 'TV' scene can dim or turn off several lights to reduce glare, while a 'Dining' scene can provide the perfect ambient lighting to entertain.

Why not plug the coffee maker into a plug adaptor and get that fresh pot brewing without even getting up from the dining table.

The number one feature

When we asked existing C-Bus® owners what their favourite feature was, they all said "The Goodnight button".

Imagine, laying in bed and being able to turn off all of your lights, anywhere in the house. But that's not all, how great would it be to turn your partner's bed lamp off if they've fallen asleep, without reaching across and disturbing them?

Need to go to the bathroom at night? Turn your ensuite light on before you even get out of bed so you are not fumbling your way around in the dark. You can even have a 'Night' scene that only turns on lights to a low level so that you don't disturb your loved ones.

Have an 'All Off' button at your bedroom door and turn off your master bedroom, ensuite, walk in wardrobe lights as well as both of your bed lamps as you walk out.

Bring a whole new level of comfort to the way you live. It's all possible, using C-Bus Wireless Wall Switches, Plug Adaptors and Remotes.

Protect your loved ones

If your kids call out at night, illuminate their path to the toilet or your bedroom by turning on bed lamps, bedroom lights or passage way lights by using your bedside remote control.

Set up an 'All On' scene that turns on all of your lights and lamps with the press of one button if you hear a strange noise.

You can even set up night-lights using the wall switch dimmer function, or utilise the built-in timer to automatically turn lights off after a preset time.

Bring extra security to your home and family with C-Bus® Wireless. Aren't they worth it?

security

A home for your lifestyle

5 simple steps to a smart home

1. Tell your electrician and builder you want C-Bus® Wireless
2. Decide which areas you want to include
3. Select your Saturn™ or Neo® switches and colours
4. Plan your system with your electrician
5. Enjoy your smart home!

Here's a tip...arrange for your electrician to come back to see you after you have lived in your smart home for a couple of months. You are bound to think of some extra features or switches you would like added.

All Off

Press the 'All Off' button and turn off every light in the house as well as your bedside lamps. Turn on your ensuite light dimly from your bed if you need to get up in the night.

Welcome Home

Activate the 'Welcome Home' scene from your car or garage, and turn on hallway, kitchen and family room lights.

Night Lights

Create night lights that can turn children's lights off automatically after a preset time. If they call out at night, turn their light or lamp on dimly from your bedside remote.

Dining

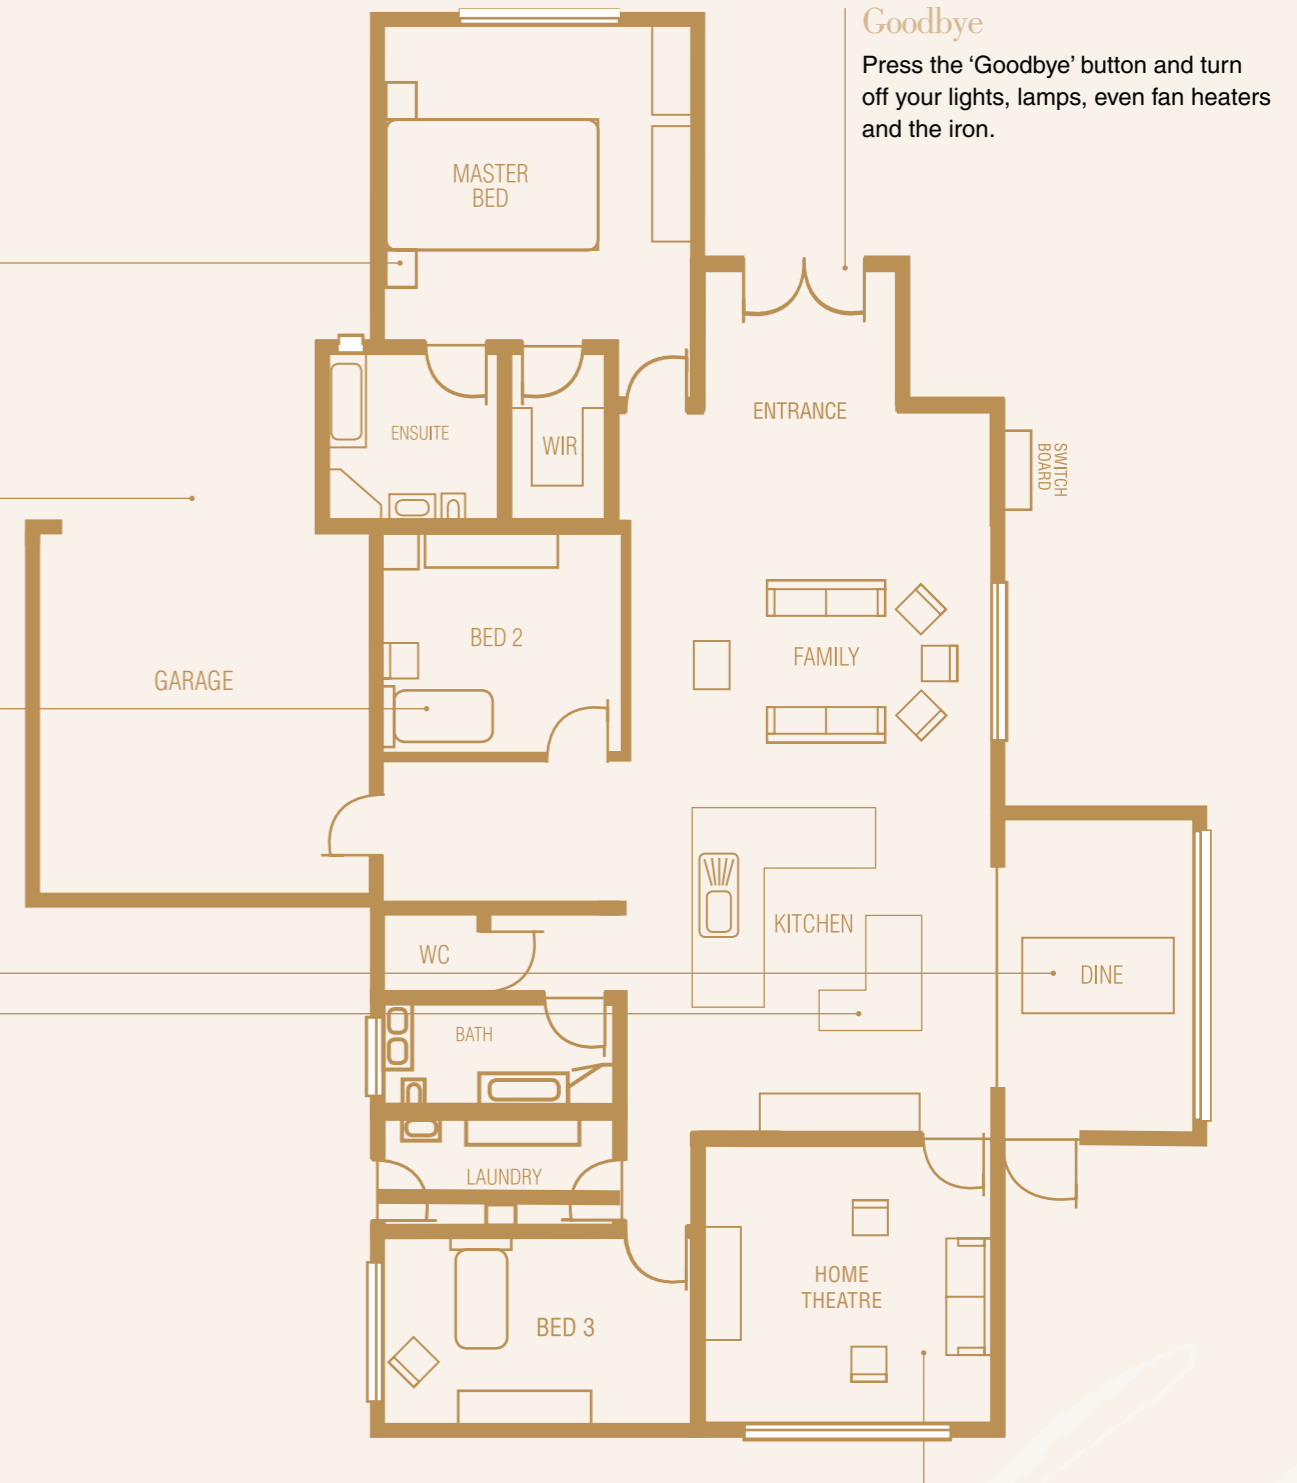

Set the perfect scene for dinner parties with friends, or romantic dinners alone. One press and several lights and lamps will go to a preset level.

Appliances & Electrical

Turn coffee makers, fan heaters, spa pumps, water features, garden lights and other appliances on and off by remote control, from anywhere inside or outside the house.

Home Theatre

Sit down to watch your favourite movie and dim the lamps and lights from the comfort of your chair.

Cruise controls

Change with your lifestyle

With C-Bus® Wireless, you can start with just one room and add to it piece by piece. Your electrician simply replaces your normal light switches with C-Bus Wireless light switches so your smart home can grow as your lifestyle changes.

Building an outdoor entertaining area? Add a C-Bus Wireless light switch to your patio light, plug adaptors for garden lights, spa pumps and water features and you can control the whole lot at the press of one button and even operate it by remote control. How good is that!

All of the switches and plug adaptors 'talk' to each other the same way as your garage door opener. This means you can push one button and have several lights and lamps turn on at various levels.

You can also set up a two-way and three-way switching, so you can turn any light on or off from any switch, anywhere in the house. For instance, you may decide that you want to be able to turn your kitchen light on and off from your lounge room light switch, as well as your family room light switch...well now you can! And the best part is you can change it at any time.
