# SNEAKY MUSIC DS

Accessing SHOUTcast Internet radio

This document explains how to add SHOUTcast Internet radio stations as a source to a Sneaky Music DS, and how to play them via the Linn GUI.

1. On a PC/laptop connected to the NAS, open TwonkyMedia and select the Internet Radio link from the Basic Setup menu.

2. On the Internet Radio section enable SHOUTcast, then select the required genres from the genre filter section.

3. Press the 'Restart server' button.

Listening to Internet radio using the Linn GUI

1. Once you have added stations, as described above, the Linn GUI will have an Internet Radio category available within the Music folder stored on the NAS.

2. Selecting Internet Radio will reveal the chosen genres.

3. Selecting a genre reveals the available stations.

4. From here, stations can be played or added to the Current Playlist.

Notes:
Due to the nature of Internet radio there may be a delay between selecting a station and audio being heard.

Radio stations can be mixed with audio tracks in the Current Playlist.
